**PROPOSED ACTION MEMORANDUM (PAM) AND SAMPLING AND ANALYSIS PLAN (SAP)
FOR INDIVIDUAL HAZARDOUS SUBSTANCE SITE (IHSS) 109 (RYAN'S PIT), OPERABLE
UNIT 2 - DCS-002-95**

Based on the discussions held at the Quality Action Team meeting last Friday, it is our understanding that the conditional stipulations identified in your August 9, 1995 letter have been removed in approving the PAM and the SAP. Therefore, the initiation of construction to remediate Ryan's Pit may proceed.

As discussed with the Environmental Protection Agency and the Colorado Department of Public Health and Environment, the Department of Energy/Rocky Flats Field Office and the integrating contractor recognize that further action may be necessary in the future at IHSS 109 to meet final remediation goals following the source removal. The further action would be dependent on whether final cleanup levels were achieved during the source removal. The groundwater at IHSS 109, which was impacted by the contaminants disposed in the trench, will be addressed as part of the groundwater management strategy for the Site.

If you have any questions regarding this approach, please contact Dave Shelton of Kaiser-Hill at (303) 966-9877.
